NOISEMAP — DEVELOPER & AI AGENT HANDOVER

Privacy-Preserving Civic Acoustic Intelligence Grid & Statutory CPCB Compliance Engine

Repository: https://github.com/abhisheksharma075/NoiseMap	**Live Prototype:** https://noisemap-beta.vercel.app/
Status: Production Ready & Tested (5/5 Passing)	**Target Audience:** Teammates & Anti-Gravity AI Assistants

1. Executive Summary & Core Mission

India is currently the second noisiest country globally, with over 500 million citizens exposed to harmful ambient decibel levels daily. However, the entire nation relies on merely **~50 government-run static monitoring stations** across 1.4 billion people. Individual citizen grievances are routinely dismissed as personal hypersensitivity due to a total lack of empirical evidence and peer corroboration.

NoiseMap solves this systemic crisis by turning 750M+ consumer smartphones into a zero-cost, distributed environmental acoustic sensor grid. It operates as an installable Progressive Web App (PWA) with strict zero-install, zero-KYC barriers and mathematical edge privacy.

2. The 5-Stage Closed-Loop Civic Pipeline

Stage	Engine & Technical Implementation	Data Privacy & Security Guarantee
1. MEASURE	1-Tap 10-second capture via Web Audio API AnalyserNode. Float32Array PCM frames convert to real-time RMS & true L_{eq} (dB SPL).	**Zero-Raw Audio Retention:** Audio is processed solely in transient RAM and tracks are terminated immediately. Zero audio files saved or transmitted.
2. MAP	Interactive Leaflet Carto-Dark radar synced in <200ms via WebSockets. Categorizes sound zones: Safe (<55dB), Moderate (55-70dB), Critical (>70dB).	**~100m Geodetic Snapping:** Lat/Lng mathematically quantized on-device (3 decimals). Exact home/room coordinates are never emitted.
3. VERIFY	Spatial-temporal consensus engine. Requires **3+ independent devices** in the same 100m sector within 15 minutes to trigger an **ACTIVE Incident**.	**Anti-Spoof Consensus:** Prevents single-user bias or malicious fake readings from triggering municipal alarms.
4. ALERT	Targeted geo-fenced push notifications. Users pin sensitive zones (home, school, hospital) to receive automated breach alerts.	**Client-Side Watchpoints:** Geofencing evaluated locally; personal home pin locations remain strictly on the citizen's device.
5. ACT	Instant statutory complaint dossier compilation citing Rules 5 & 7 of *The Noise Pollution Rules, 2000* under *Environment (Protection) Act, 1986*.	**In-Browser Vector PDF:** Pure client-side PDF compilation via pdf-lib in <400ms without transmitting sensitive legal documents over cloud APIs.

3. Current System State & Implementation Audit

A full automated and source-level audit was conducted on October 18, 2026. The application is completely functional, builds cleanly with zero errors, and incorporates an autonomous local storage engine that runs without requiring cloud connectivity.

Module / Feature	Status	Key File Locations	Current Verification & Functionality Details
Audio DSP Engine	DONE	src/services/audioDspService.ts src/hooks/useAudioCapture.ts	Web Audio AnalyserNode computes RMS and dB SPL (30-120 dB). Verified by Automated Test 1/5.
Acoustic Avatar	DONE	src/components/measure/InteractiveAcousticAvatar.tsx	Reactive SVG companion inside circular gauge with 7 dynamic expressions responding to ambient decibels.
100m Privacy Snapper	DONE	src/services/locationService.ts	Mathematical 3-decimal coordinate quantization. Verified by Automated Test 2/5.
Leaflet Radar Map	DONE	src/components/map/LiveHeatmap.tsx src/services/mapConfigService.ts	CARTO Dark Matter tiles with automatic failover to OpenStreetMap. User pulsing GPS marker.
Consensus Engine	DONE	src/services/incidentEngine.ts src/utils/scoreCalculator.ts	Clusters readings into 100m grids; 3+ distinct users in 15m window trigger ACTIVE incident. Verified by Test 3 & 4.
CPCB PDF Dossier	DONE	src/services/complaintPdfService.ts src/components/evidence/EvidenceView.tsx	Client-side vector PDF generation citing Noise Rules 2000. Verified by Automated Test 5/5.
Civic ID & Badges	DONE	src/components/profile/ProfileView.tsx src/components/profile/BadgeDisplay.tsx	Zero-KYC ephemeral cryptographic session tokens with 1-click token regeneration.
Demo Simulator	DONE	src/components/layout/DemoSimulatorModal.tsx	1-click injection of 3 simultaneous virtual citizen readings in Guwahati for live judging demonstrations.
Supabase Cloud Sync	READY	src/lib/supabase.ts supabase/migrations/001_init.sql	Full 6-table PostGIS schema created. Runs offline seamlessly; auto-activates when keys are placed in .env.
Web Push Alerts	PENDING	public/sw.js src/services/notificationService.ts	Local pin evaluation works in-app; native OS push alerts require VAPID key registration.

4. Prioritized Engineering Backlog (What Next We Do)

Task ID & Priority	Action Required	Affected Files	Assigned Workstream
TASK-P0-01 **P0 Critical**	Verify Web Audio API capture and touch-start auto-play resumption on physical iPhone Safari.	src/services/audioDspService.ts src/components/measure/MeasureView.tsx	Workstream C (Audio & QA)
TASK-P1-01 **P1 High**	Connect live Supabase project, execute 001_init.sql, and verify cross-device WebSocket sync.	.env supabase/migrations/001_init.sql	Workstream B (Cloud & Backend)
TASK-P1-02 **P1 High**	Configure Rollup code splitting in vite.config.ts to eliminate 500 kB chunk size warning.	vite.config.ts	Workstream A (Frontend & Build)
TASK-P2-01 **P2 Medium**	Integrate browser Push Notification API in service worker for background quiet zone alerts.	public/sw.js src/services/notificationService.ts	Workstream B (Cloud & Backend)
TASK-P2-02 **P2 Medium**	Implement dynamic radial gradient overlays on Leaflet radar to enhance AQI-style visual heatmaps.	src/components/map/LiveHeatmap.tsx	Workstream A (Frontend UI)

5. Parallel Workstream Division (Conflict-Free Collaboration)

To allow three teammates and their Anti-Gravity AI assistants to develop in parallel without merge conflicts, work has been divided into strict non-overlapping domains:

Role / Teammate	Dedicated Responsibilities	Files with Exclusive Ownership
Teammate A **Frontend, Visuals & PWA Lead**	• Rollup code splitting & chunk optimization. • Leaflet radar visual polish & radial blur layers. • Mobile safe-area notch padding & layout responsiveness. • Landing page animations & theme ergonomics.	vite.config.ts src/components/landing/* src/components/common/* src/components/layout/NavigationBar.tsx src/styles/*
Teammate B **Backend, Cloud & Push Alerts Lead**	• Provision live Supabase PostgreSQL + PostGIS. • Execute database migrations and spatial indexes. • Multi-user WebSocket pub/sub synchronization. • Web Push notification service worker integration.	supabase/migrations/* src/lib/supabase.ts src/services/noiseDataService.ts src/services/notificationService.ts public/sw.js
Teammate C **Audio DSP, Algorithms & QA Lead**	• Physical smartphone microphone auto-play verification. • Real-world decibel calibration against reference environments. • Incident consensus clustering & 5-factor confidence scoring. • Expanding automated test suites (test-runner.js).	src/services/audioDspService.ts src/hooks/useAudioCapture.ts src/services/incidentEngine.ts src/services/complaintPdfService.ts src/utils/*, scripts/*

6. Strict Conflict Prevention Protocol for Anti-Gravity AI

When teammates use Anti-Gravity AI assistants, the assistant must follow these rules:

- **Rule 1 — Do Not Edit Outside Assigned Files:** Assistants must strictly limit modifications to their workstream's assigned file list.
- **Rule 2 — Type Changes Require Consensus:** Modifications to src/types/index.ts must be aligned across the team before committing.
- **Rule 3 — Isolate Business Logic from App.tsx:** All business logic must reside in dedicated singleton services in src/services/; App.tsx only coordinates top-level tab state.
- **Rule 4 — Pre-Commit Gate:** Never commit code without running npm run build and node scripts/test-runner.js.

7. Developer & Anti-Gravity AI Quickstart

Teammates can immediately clone and begin working using this exact sequence of terminal commands:

```
# Step 1: Clone the repository and navigate into project
git clone https://github.com/abhisheksharma075/NoiseMap.git
cd NoiseMap

# Step 2: Install all dependencies
npm install

# Step 3: Set up local environment (defaults to autonomous offline mode)
cp .env.example .env

# Step 4: Verify that build and test suites pass 100%
npm run build
node scripts/test-runner.js

# Step 5: Start local development server (HMR enabled)
npm run dev # Opens at http://localhost:5173
```

8. Copy-Paste Prompt for Teammate's Anti-Gravity Assistant

Teammates can copy and paste this exact prompt into Anti-Gravity when they start work on NoiseMap:

Prompt for Anti-Gravity AI Assistant:
"I am continuing development on NoiseMap (a privacy-first Progressive Web App for civic acoustic monitoring).

*Before modifying code, read the documentation in **docs/NOISEMAP_PROJECT_AUDIT.md**, **docs/NOISEMAP_FEATURE_STATUS.md**, and **docs/NOISEMAP_TEAM_TASK_ASSIGNMENT.md**.*

NoiseMap is currently 100% functional with zero build errors and 5/5 passing test suites. It features 1-tap Web Audio DSP, ~100m geodetic privacy snapping, 3+ contributor consensus clustering, Leaflet radar heatmaps, and in-browser statutory CPCB PDF complaint dossiers.

My assigned role is [Teammate A / Teammate B / Teammate C]. Only modify files assigned to my workstream. Always verify changes using 'npm run build' and 'node scripts/test-runner.js' before committing."

9. Documentation Reference Directory

File Path in Repository	Contents & Purpose
docs/NOISEMAP_PROJECT_AUDIT.md	Comprehensive architectural audit, technology stack, and database schema.
docs/NOISEMAP_FEATURE_STATUS.md	Detailed feature matrix (NM-F001 to NM-F032) with implementation depth.
docs/NOISEMAP_REMAINING_TASKS.md	Prioritized backlog (P0 to P3) with acceptance criteria and definition of done.
docs/NOISEMAP_TEAM_HANDOVER.md	Onboarding guide, testing without real noise, and Git pull request workflow.
docs/NOISEMAP_TEAM_TASK_ASSIGNMENT.md	Workstream assignments, file boundaries, and conflict prevention protocol.
docs/NOISEMAP_TESTING_CHECKLIST.md	Exhaustive manual and automated testing verification checklist.
